

Delivering mailboxes for the Worlds'
most prestigious postal addresses

High Quality secure mailbox systems

Over 28 years, The Safety Letterbox Company Ltd, has developed many options to providing suitable mailbox solutions throughout the Middle East. As each Country handles mail delivery differently, there are a wide range of requirements, the security of mail delivery and its arrival to the end user.

Having worked with most of the Middle East postal authorities over the years, we understand their vision for mail delivery. It is fair to say that the architects and developers in each country can facilitate mail delivery inside their developments - providing a mailbox system for the owners, staff or occupiers that can be handled by the property management.

Internationally, The Safety Letterbox Company have supplied many projects in the Middle East in both residential and commercial properties and for the Postal Authorities themselves.

We are able to supply and install mailbox arrangements to suit the profile and aesthetics of any development. We offer a choice of finishes, colours, logos, engraving, mailbox arrangements, locking options and sizes. No job is too big or concept unachievable - our bespoke manufacturing facilities enable us to produce variations on all of our 130 standard models.

Fire rated mailboxes are also available where mailboxes need to be recessed into a fire rated wall or on a fire route.

As the UK's market leader, we are confidently and regularly providing mailbox systems worldwide - offering the ultimate in mail delivery. We also offer a full turnkey solution with installation services available in the Middle East.

Since joining the Renz Group in July 2012, we have additional products to offer the market from our group providing even more choice and the absolute best for our customers.

Operating under strict ISO9001:2008 quality standards and with a reputation of quality you can trust, you can be assured of the best service and product.

Burj Khalifa

At home in the world's most prestigious address

THE SAFETY
LETTERBOX
COMPANY LTD

The Burj Khalifa, Dubai, still holds the world record as the tallest building in the world. This skyscraper is a world-class destination and the magnificent centerpiece of Downtown Dubai, Dubai's urban masterpiece.

The world's most-prestigious address is home to a select few. With 900 residences including studios, one, two, three and four bedroom suites, The Residences at Burj Khalifa are designed for the connoisseur.

The Safety Letterbox Company Ltd manufactured and installed a completely bespoke mailbox system that is recessed behind luxurious oak panelling in the towers guest services area. This enables all mail for residents to be sorted and allocated into individual secure mailboxes, providing them with a unique mailing address.

Our team worked closely with Skidmore, Owings & Merrill architects and Emaar properties, to produce a visually impressive and secure bespoke arrangement of 28 banks of 50 mailboxes for three purpose designed mailrooms in the impressive skyscraper.

“As an established & reputable British manufacturer, we are in a prime position to offer our customers high quality, cost effective bespoke solutions not limited to our UK home market. By demonstrating our unique selling features, impeccable standards of design & security, throughout a portfolio of completed prestigious projects we provide a unique proposition to customers worldwide.”

Safety Letterbox Company, CEO Alison Orrells

Safe secure mail storage

RasGas is one of Qatar's leading energy companies and one of the most innovative and successful businesses in the global liquefied natural gas industry.

To increase the secure handling and storage of the companies mail, The Safety Letterbox Company Ltd, were tasked with providing an effective answer to eliminate the problems in losing and misplacing their post. The sorting and distribution of the mail was time consuming and there were no secure measures in place regarding access and privacy to sensitive mail being distributed around the company.

The solution was provided and installed by The Safety Letterbox Company taking all their needs into consideration.

Incoming mail would be posted into individual mailboxes via a letterflap and then retrieved by the recipient of the mail via a digital locking system. This would have the effect of cutting out the use of keys and increasing security when using the mailbox (as codes could be changed and updated as employees left the company).

Outgoing mail was accommodated in larger individual freestanding posting boxes, with access via the digital locking system.

Standalone battery operated digital locks provides the user with immediate and simple keypad access without the need for a key. Users have the flexibility to set and change their personal entry code whilst a pre-set master code ensures that supervisor access is available at all times.

Our sales and design departments worked in unison with RasGas interior designers to agree the design, operational functionality, size and colour of the new mailbox system, to ultimately ensure they had an effective and secure solution to mail coming in and going out for every department and location within their offices - this ensured that all employees had specific addresses and traceability and security of mail. We were also able to send our own installation team to Qatar to work on the project, which was successfully completed within 2 weeks.

Safety Letterbox Company, CEO Alison Orrells

Qatar installation team

The Pearl

A community of mailboxes

The Pearl-Qatar is a man-made island developed to be the most prestigious area in Doha. It is an exclusive island in a Riviera style. The development consists of retail shops, town houses, residential apartments and villas. SLB has been in discussion with the developers to install mailing solution for the whole community via Qatar Post.

The design of the mailboxes was developed to specially comply with the Qatar Post requirements: A high quality secure mailbox system that fell within their budget constraints.

Looking good at the *Kempinski*

In order to deal with mail at their residences, the Kempinski Hotel required a freestanding bank of mailboxes arranged in an aesthetically pleasing way to adorn their lobby area.

Mailboxes you can bank on

Qatar National Bank

Photo © Alan Holden

The Qatar National Bank was formed in 1964 and is the largest bank in Qatar. It has over 61 global branches and has played a major role in financing construction and infrastructure projects around the world.

The company has also been instrumental in developing the towers in Qatar that house the major financial institutions and was a key force in securing the countries successful bid to host the 2022 FIFA world cup.

The Safety Letterbox Company was approached by the QNB to update and improve the efficiency and security of its internal mailing system.

Head of Mail at QNB worked closely with our International Sales Manager Anas Al Haj to design and manufacture a bespoke solution to the banks requirements. They wanted 105 individual mailboxes in separate units with roller shutter doors.

SLB were chosen to manufacture the individual units as they were shown to have the necessary expertise to develop and supply the bespoke mailing storage units to QNB's specifications.

QNB wanted a pigeon hole mailing system that could handle a large amount mail that could be sorted into individual compartments. They also wanted the compact mailing units to have secure locking roller shutter doors to enable them to be sited in the mail distribution department of their offices. After discussions, drawings were provided and approved to meet QNB requirements.

SLB handled the whole process by organising the transportation, delivery and installation of the bespoke mailing units. SLB's International Sales Manager Anas Al Haj visited Qatar to oversee the installation process and ensure that the customer was happy with the mailing system. The mailing units were successfully supplied as specified onsite in the company's headquarters in Qatar.

Hong Kong

Know when you have mail

An architect led project for 30 bespoke stainless steel mailboxes in a 3 high by 10 wide configuration were supplied to the financial district of Hong Kong. The architect was looking for a distinctive design and opted for a circular cut out vision panel in the door of the mailbox.

Understated, clean lines and the

feel of luxury

Developers Boreas required a through the wall mailbox system for its new luxury development in San Pedro Garza, Mexico. Project Manager Senior Ramos wanted a high specification mailing system to compliment and reflect the feel of the luxury development.

A bank of stainless steel mailboxes were chosen for their aesthetic and functional appeal. The high quality silicone brushed finished stainless steel mailboxes were sited in the external wall of the entrance lobby.

The uniquely designed mailboxes have sprung return mail entry flaps that are mounted in a stainless steel fronted panel.

Mail is delivered through the front entry flap which passes through the wall of the apartment block to be retrieved internally by the resident, who opens the back of the mailbox with their own security coded key.

Maximising every bit of space

For projects where a full post room is required, there are a number of options.

For those that require sorting of the mail on one side via pigeon hole type arrangements and lockable doors on the front face, such as projects completed for Kuwait Post Royal Mail, through to a complete room fit-out maximising every bit of space for the concierge or post person to sort mail. SLB have solutions for all. Large installations and maximizing space is our speciality.

We are delighted to work on projects with Emirates Post, Bahrain Post, Qatar Post and Kuwait Post.

Think outside the box...

Mailboxes can be virtually any size - A5, A4, A3, parcels etc, they can also be in a variety of sizes in one bank.

They can also reflect their surroundings, eg curved bank of boxes to suit the radius of the wall area.

A dynamic use of colour can really integrate them into a building - a variety of colours in a bank works very well and can produce a visually stimulating feature.

Numbering, logos and wording can also be incorporated to your unique requirements.

This bespoke bank of mailboxes housed between American oak shelves consisted of 216 COM2 black mailboxes in a 8 high x 27 wide unit configuration, located in the apartments reception area. These mailboxes were not only chosen for their aesthetically interesting design but for their secure functionality.

Specialist bespoke mailboxes have been developed to suit customer requirements.

Our dedication to research and development together with our 'partnership' approach to working with our customers provides unique and successful solutions. Available in various shapes, sizes and finishes, units are designed and manufactured to meet their specific requirements.

If you have a project that requires unique mailboxes designed especially for you then talk to The Safety Letterbox Company, we will help you to achieve the perfect mailbox solution.

From Concept to Reality, we will provide full 2D and 3D drawings as required to turn your vision into reality.

Turn your vision
into reality

“We have had many unique projects over the last 28 years that demonstrate our skills in producing secure and practical solutions that are also visually stimulating. Both in the UK and internationally we look forward to working with architects and developers who want to create an impact in the area of mail delivery. It is a pleasure to work alongside them in the knowledge that we will produce the ultimate solution.”

Safety Letterbox Company, CEO Alison Orrells

Individual properties

Protect your home's mail

We have a very wide choice of mailboxes for individual dwellings - postboxes to adorn any villa, home or apartment.

Suitable for wall, fence or post mounting, the choice ensures you have a mailbox suitable for the look and location of any property. With finishes in aluminium, polyester powder coated to virtually any colour, steel, stainless steel and copper, it ensures that the mailbox can safely contain the mail whilst looking good.
